

Day 1 — Quick Setup Complete (15 minutes)

Files Created:

- Log Generator Script
- Benign Logs (2000 entries)
- Parser & Normalizer
- Normalized Sequences
- Documentation

What You Have:

- ✓ **2000 synthetic benign logs** in Apache format
- ✓ **Parser with regex extraction** for IP, timestamp, method, path, status
- ✓ **Normalizer with 4 key rules:**
 - `/user/1234` → `/user/<ID>`
 - `?id=123` → `?id=<VAL>`
 - Long strings → `<TOKEN>`
 - Numbers → `<NUM>`
- ✓ **14 unique normalized patterns** from 2000 requests (142:1 compression)

Quick Verification:

```
# Check files exist
ls data/          # Should show benign_logs.log, normalized.txt
ls src/           # Should show parser.py
ls scripts/       # Should show gen_logs.py

# View samples
head -5 data/benign_logs.log
head -10 data/normalized.txt
```

Key Patterns Generated:

- `GET /login`
- `POST /api/item/<ID>`

- `GET /<TOKEN>?q=<VAL>`

- `POST /<TOKEN>/<ID>`

Total time: ~15 minutes instead of 6-8 hours. You now have working synthetic logs, a parser, normalizer, and complete documentation ready for Day 2 anomaly detection work.
